

PressurePro connect

TPMS SOFTWARE THAT DRIVES YOURS BOTTOM LINE

VAN-569: Right steer is experiencing high average temperature trends.

TRK-68: Right, outside dual experiencing critically low pressure.

VEH-34: Lookin' good!

TIRE MANAGEMENT, SIMPLIFIED.

A comprehensive software platform, built specifically for fleets utilizing PressurePro's market leading Tire Performance Management Solutions, Connect arms users with complete back-end tire data reporting and analysis abilities, arming fleets with unmatched visibility and control of tire management practices.

easy-to-use dashboards

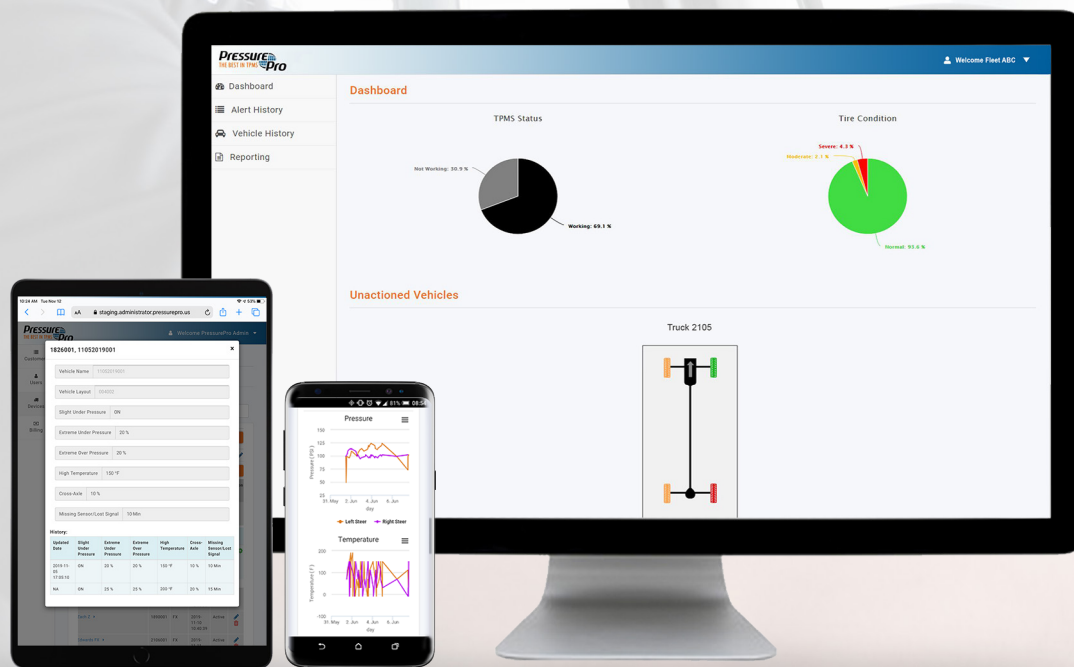

View prioritized tire performance data (including tire status and pressure & temperature graphing). by vehicle, terminal or fleetwide, in seconds

custom alert parameters

Configurable periodic and alert based reports and alarms help streamline tire maintenance.

access from anywhere

Complete tire performance data, for your entire fleet, accessible from any device with an internet connection.

already using connected devices?

Leverage PressurePro's FX to add powerful and cost effective tire pressure management for your entire operation.

The only Bluetooth TPMS option designed specially for fleet applications, FX utilizes PressurePro's custom designed Fleet App to stream your tire performance data directly to Connect. The result? Drivers gain in-cab monitoring straight to their existing smart devices, while fleet controllers and managers gain full tire performance visibility for their entire fleet.

how does it work?

Valve mounted Sensors report real time tire performance data via RF to the FX, in-cab.

FX utilizes Bluetooth to display data to drivers.

Data is delivered via cell to Connect, giving fleet managers actionable data.

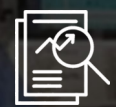

Real time performance data is delivered direct to controllers for unmatched control of tire management practices.

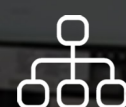

Automated alerts allow for immediate correction of critical tire situations before they become costly or dangerous.

Exportable performance history is safely stored, allowing tire performance information to be retrieved and reviewed

Trend analysis tools enable controllers to easily identify tire performance patterns, enabling predictive tire management.

Advanced hierarchy abilities allow fleets to customize access and visibility per their security and organization needs.

Smart dispatch capabilities arm fleets with an actionable scoring system, helping further drive savings and efficiencies.

COMPLETE VISIBILITY OF EVERY TIRE IN YOUR FLEET.
IN-CAB, IN THE FIELD OR IN THE OFFICE.

ADDING SAFETY AND SAVINGS
TO EVERY ROAD YOU TRAVEL,
SINCE 1991.
